DETAILED ACTION***Allowable Subject Matter***

All claims are allowed. Claims 1-10, 12 and 13 are allowed. The following is an examiner's statement of reasons for allowance. As noted in the file history (such as at page 10 of the amendment): According to the present invention the data relay server includes first means for encrypting retrieval condition data included in a query received from a client computer, second means for producing a query message destined for the database server including the retrieval condition data encrypted by the first means and an identifier of an encryption function used to generate the encrypted retrieval condition data, third means for transmitting the query message produced by the second means to the communication network, fourth means for receiving from the database server via the communication network, as a retrieval result, data matched with the encrypted retrieval condition data retrieved by matching the data with the encrypted retrieval condition data, wherein the matching is performed by encrypting at least one data item read out from the database in the database server using an encryption function designated by the identifier in the query message and comparing the at least one data item to the encrypted retrieval condition data, and fifth means for producing a response message for the client computer based on the retrieval result received by the fourth means and transferring the response message to the client computer. The prior art did not teach or suggest the particular features of the claims.

Art Unit: 2134

In other words, the particular ways that the relay server is used in the context wherein the matching is performed by encrypting at least one data item read out from the database in the database server using an encryption function designated by the identifier in the query message and comparing the at least one data item to the encrypted retrieval condition data is not taught or suggested by the prior art.
